RE: Your T6161

1. Bill Wade approves cartridges for production.
2. No MAX cartridges have been released to date.
3. I have reviewed MAX cartridges and, as a point of information, are we required to share the copywrite notice with Hal Labs. All games received from Japan show copywrite Commodore & Hal Labs.
4. Am ready to release 3505 Road Race and 3502 Jupiter Lander.
5. Request the following changes:
 - a. 3508 Mole Attack - should work with joystick.
 - b. 3501 Avenger - Plan to release half screen version in limited quantity and make a running change to full screen in September.
 - c. 3504 Radar Rat Race - Screen size is OK, we must correct random sprite glitches which appear in radar side of screen. Please try different color combo to reduce color bleed on copy on screen. Please time required.
 - d. 3101 Mini-Basic - Roy Thomas has approx. 7K ROMS in production. These were released long ago when mini-basic was to be part of the MAX machine. It also requires a 2K RAM. Because of the time frame, we should use the parts and buy the 2K RAM. A new version is being worked and should be ready sometime this month. The instruction books will be written without regard for the 2K RAM.
7. 3201 Music Maker is in final stages with Joe Mac.
8. We should plan to produce these products on EPROM. Do you agree?
9. Omega Race 3401 In your T6084, this was to be sent to Kit. Has not been received.

Regards,

Bill Wade
